INTRODUCTION:

A mosque is a place for worship. In Bangladesh, the majority of people are Muslim for which reason we can find mosques everywhere in different areas. It is known that the mosque is maintained by Imam, Muezzin, and khadim. Our system will help to requite them in mosque which will be useful for everybody. Through this software, the imam, muazzin, and khadim can apply for othermosques. Besides, there will also be a donation system for the mosque. There will also have a feature like location which will help to locate where any female mosques are available.

BENEFITS:

1. Offline recruitments take time and are a lengthy procedure. Unlike this type of recruitment, our software system will take the least amount of time to do the whole recruitment. Usually, offline recruitment requires applicants to do some paperwork and they might need to go places to register. On the other hand, our system won't take this much effort to find a job for aspiring Imams or Muezzins. As this will be held online, the experience will be smoother and effortless.
2. As our software will be a one-stop for people who are seeking jobs to be a future Imam or Muezzin, a lot more vacant positions will be available for them to choose from. For example, one canfind many vacant positions for his desired jobs in the area he is interested in. On the other hand,seeking a job offline is difficult as one may need to go to different mosques to collect information.
3. This software will be a great help for practicing Muslims who are doing their jobs at their workplace or in a hurry but unable to do their Salah. As some workplaces don't provide the necessary facilities to do prayers, one can use this system and can go to the nearest Mosque. It will take one click and he will find his desired location to pray and get back to work afterward.
4. Some Mosques have facilities for women to pray their Salah. It will be the perfect solution for them. Like men, now women will be out there doing their business, and whenever they need to pray, they can log in to the system, and find the nearest Mosque that offers this facility.
5. Our software will show mosques that need donations. People can log in to the website and find the preferred mosques that they want to donate to. Also, people can see the percentage of the donation amount are done.

Software System:

When a user uses this software they have to sign-up (except admin) and there will be three options. The first one is **Applicant**, the second one is **Recruiter** and the last one is **General**. When a user sign-up for this software they have to choose an option.

In the **Applicant** option, candidate can make their profile and apply for the imam, muazzin, or khadim. In our software, there will have a database. In this database, all the information will save on the candidate who wants to be an imam, muazzin, or khadim. There will be a notification bell system that shows which mosque needs imam, muazzin, or khadim to the candidate. Candidates can apply for those recruitment posts via notification bell.

In the **Recruiter** option, allow users to do a recruitment post for the imam, muazzin, or khadim. When users post recruitment for the imam, muazzin, or khadim. For that post, the candidate will respond to this post and the user can show all the information of the candidate which the candidate uploads on his profile. If users choose an applicant they can also communicate with the candidate. There will be another option name interview, which allows the user can take an interview with the candidate via video or audio.

In the **General** option, users can search nearby mosques from their current location. If users will female, they can also search for the female mosque. Besides, users can search for maqtob (where Islam is taught). There will have two categories of maqtob. One is male and another is female. Users also can search for both male and female maqtob which they want. Then users can donate to any mosque which they want. And also users can see which mosque has how much funds. User also can see their total donation details.

System Features:

Admin:

- Admin can log in.
- Admin can view and access all of the user's profile.
- Admin can remove any account.
- Admin can add applicant.
- Admin can view whose are donating to mosque, donation amount, how much donated.

Recruiter:

- Recruiter can log in.
- Recruiter can do post for Imam, Muazzin, Khadim.
- Recruiter can update his profile.
- Recruiter can view applicant profile.
- Recruiter can see how many applicants do apply on his post.
- Recruiter can choose any applicant as a Imam, Muazzin or Khadim.
- Recruiter can communicate with the applicant.

Applicant:

- Applicant can login.
- Applicant can update his profile.
- Applicant can view recruiter profile.
- Applicant can view recruiter recruitment post.
- Applicant can do apply to the recruiter recruitment post.
- Applicant can communicate with the recruiter.

General:

- General can login.
- General can search nearby mosque.
- General can donate to the mosque.
- General can see which mosque has how much fund.

Project Requirements:

- 1) **Time:** To build this software we need three weeks. 1st week for software planning. 2nd week for creating UI/UX, diagram and database. 3rd week for implement the planning(codding) and testing the software.
- 2) **Resources:** We need total 4 man power to build this software.
- 3) **Equipment:** To build this software we need 4 pc/laptop, 4 table, pen and papers, bandwidth connection.
- 4) **Tools/Software:** To build this software we need browser, excel, drawio (for create diagram), adobe illustrator (for create UI/UX), Visual Studio (for codding), Microsoft teams (for meeting).
